Game Library Manager

This project, **Game Library Manager**, was developed as part of the Linux Operating System Lab.

Project Details

- **Project Title:** Game Library Manager
- **Project ID:** L76
- **Subject:** Linux Operating System Lab
- **Lab Code:** 260120510

Project Description

Game Library Manager is a Linux-based project designed to manage a personal collection of video games.

It allows users to add games, view game records, filter games by platform or genre, track playing hours, calculate completion percentage, and identify the most-played games.

Features

- Add a new game to the library.
- View all saved games.
- Filter games by platform and genre.
- Calculate total playing hours.
- Calculate game completion percentage.
- Display the top 5 most-played games.
- Create backups of game data.
- Maintain an activity log.
- Generate a weekly summary using Cron.

Faculty Guidance

This project was completed under the guidance of:

Dr. Anjum Y. Mansuri

Assistant Professor, Computer Applications

LJ Institute of Computer Applications, LJ University, Ahmedabad.

Project Structure

```
gamelib/
├── lib/
├── data/
├── reports/
├── backups/
├── logs/
├── main.sh
└── README.md
```

How to Run

1. Open the Linux Terminal.
2. Navigate to the project directory.
3. Give execution permission to the main script.
4. Run the project.

```
cd ~/linux_project/gamelib
chmod +x main.sh
./main.sh
```

Operating System

Linux
